

## Training

Image Source <https://nationalethicscenter.org/nsf-rcr-requirement>

Inventors of GMO products can have diverse backgrounds; ranging from scientists who have earned Ph.Ds to those who conduct science experiments with less formal training. Thus, safety training is needed on varying levels to ensure products are produced and released safely.

How have your safety training needs been met? (i.e. formal safety training courses or experiential training)

Do you believe that safety training in your field is adequate for the products being produced?
