

WP 5.2 OPTIMISED RESOURCE USE FOR TOP QUALITY FRUIT

Leader	UNIBO-DCA (Alma Mater Studiorum Universita di Bologna)-Italy. Guglielmo Costa
Other participants	DIAS (Danish Institute of Agricultural Sciences)-Denmark; ACW (Agroscope Changins-Wädenswil Research Station ACW)-Switzerland; IRTA (Institut de Recerca i Tecnologia Agroalimentàries)-Spain ; INRA (Institut National de la Recherche Agronomique)-France; NCRI (Norwegian Institute of Agricultural and Environmental Research)- Norway; WUR-PPO (Wageningen UR-Applied Plant Research Research)-Netherlands; WUR-PRI (Wageningen UR-Plant Research International)-Netherlands; WUR-LEI (Wageningen UR-Plant Research International)-Netherlands; FiBL (Forschungsinstitut für biologischen Landbau)-Switzerland; UNIPD (University of Padova)-Italy; KIS (Agricultural Institute of Slovenia)-Slovenia; NT (Netzteam)-Switzerland
OBJECTIVES	
<ol style="list-style-type: none"> 1. To better exploit natural plant resources via innovative and environment-friendly approaches for crop load regulation. 2. To make the use of limited natural resources such as water, light and naturally occurring nutrients more efficient. 3. To define and implement decision-supporting tools for properly steering the production process along above-mentioned lines. 	
TASKS	
<p>Task 5.2.1 Non-alternating top quality fruit orchard cropping patterns.</p> <p>Task 5.2.2 Efficient use of naturally occurring limited resources.</p> <p>Task 5.2.3 Tools for an optimal exploitation of the quality potential of peach and apple.</p>
