

Acknowledgements

This document acknowledges many colleagues who have contributed to the construction of this Metacognition Toolbox in a great variety of ways.

Thanks to Joseph D. Novak and Alberto Cañas for their continuing professional work on concept mapping, *CmapTools* and conferences that bring researchers and practitioners together. From these conferences, I especially appreciate the work of my co-author James Gorman; Mauri Ahlberg and Jacqueline Vanhear for their work in applying concept mapping to teacher training and to sustainable development in particular; also, James Proctor and Jennifer Bernstein for experimenting with different applications of concept mapping in their environmental methods course at Lewis & Clark College.

Thanks to Tyler Miller for authoring his textbook *Living in the Environment* and the years I worked on the textbook's ancillaries, which included the Tree Diagram. Also thanks for his inclusion of a concept map in the front cover as well as directions on how to make concept maps in a special Appendix of the textbook.

Thanks to Jim Gorman and Jeff Beaudry for sharing a videoclip demonstrating Jim's use of concept mapping as both a teacher and with his students.

Thanks to Jake Foster for his work on climate change/ weather strand maps and his unflinching efforts on the Next Generation Science Standards and Massachusetts Science, Technology, Engineering Standards.

Thanks to Christy Herren, Annette deCharon, and Bob Chen for leading me to the COSEE's application of concept mapping to compare the concept maps of scientists and teachers.

Thanks to Natalie Belli and Annie Pugh for their participation in the Professional Development offered by the Museum Institute for Teaching Science and for introducing me to the website for Clear Thinking.

Thanks to Jim Chandler for his graphic organizer that demonstrates clear thinking to solve environmental problems and his deep commitment to environmental education, particularly his leadership of the Maine Environmental Education Association. His strategy is well-referenced with additional work. He co-presented this work with Jane Heinze-Fry at a New England Environmental Education Association Conference in Vermont.

Thanks to Tamara Ledley for her leadership of the CLEAN network and special people who participate on this network. Thanks particularly to Mark McCaffrey for the development of climate change education links to the National Climate Assessment; Frank Niepold (NOAA) for his work with strand maps, and Scott Carly who led me to the Systems Thinking and Climate Change Playbooks.

Thanks to Marianne Krasny for her course on Civic ecology and its relationship to problem solving, her outreach via MOOCs, and her leadership with EEcapacity. Thanks to Cornell graduate student Yue Li for her work on visualizing connections among organizations.

Thanks to William Stapp and his community problem solving work, which was adapted in the ancillary *Critical Thinking and the Environment*. Thanks to Bora Simmons for her work on the Forum on Climate Change as a model to assist decision-making.

Thanks to John Sterman for his work with the Club of Rome in Systems Dynamics, his work with graduate students for development of Climate Interactive and Juliette RooneyVarga for her application of Climate Interactive at UMass Lowell and presentations at conferences.

Thanks to Kim Kastens for her encouragement that a metacognition toolbox is a worthwhile idea because it's one of the most difficult goals of higher education to get across to students. And thanks to her making me aware of the Model-Evidence-Link Diagrams to improve thinking about complex problems as well as of Tainter's views about the complexity of problems and solutions over the course of time.

Thanks to Anne Eggers for her work with the Science Practice Model described by M. Nyman and T. St. Clair in "A Geometric Model to Teach Nature of Science, Science Practices, and Metacognition" in the *Journal of College Science Teaching*.

Thanks to Brian Moon for his work on digital assessment of concept maps through the development and application of Sero!
